Hiring Team, KLA

Your posting is a reconciliation job at heart: bookings snapshots, order holds, backlog and quarter-end close all have to tie back to one true number before the quarter closes. I built exactly that kind of dashboard at Sensata, tracking 1,200 pricing and bookings opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, and I know how much of the job is chasing down the line item that will not reconcile until someone checks it by hand.

I set up and run the CRM and CPQ configuration myself as founder of PriceKeel, including forecast and pipeline reviews and deal approvals, and I built the audit trail that gives Finance an explainable record behind every exception. That is the same instinct your posting asks for: systems ownership over order and quote data that Finance can trust without a follow-up call.

The cross-functional part is not new either. At Applied Materials I size the semiconductor market with Sales, Engineering and Accounts, turning field and factory input into one view, and I run OKRs with weekly and quarterly business reviews that carry P&L targets. Your posting names Divisional Sales, Finance, Master Schedulers and Engineering as the people this seat has to keep in sync; that is the same set of desks I already work across, just with shipment slotting and revenue recognition added to the list instead of pricing.

One thing I would push back on gently: a bookings and backlog seat like this often gets treated as pure data entry. It is not. The Bleeders and Leakers dashboard only mattered because it told leadership which \$433M of the gap to chase first, not just that a gap existed. I would bring that same instinct to KLA, using the reports to flag which order holds or reconciliation misses are actually worth escalating during peak fiscal periods, not just logging them.
