Hiring Team, FOY | For You

Your posting says this isn't a role for someone who just executes tasks, you want someone who can challenge assumptions and figure out what happens next with an ambiguous problem. That is the actual shape of the job I already do at PriceKeel: I set the strategy, run the pricing analyses and GTM calls, and manage the investor conversations for our first round, all with no department to hand the unowned problem to.

The clearest proof I can point to of turning a pricing analysis into a number is the Bleeders and Leakers program I built at Sensata: a margin mandate with no existing owner across a $627M business. I built the dashboard that turned 1,200 scattered pricing opportunities into a $433M shortlist, then negotiated $700K plus of it back into margin in two quarters, working directly with senior executives on the AP26 revenue models the business case depended on. In the same stretch I raised distributor and channel-partner margins from 53% to 61%, the kind of partnership work your posting calls out under identifying new business avenues.

Market entry and go-to-market work are not new either. I owned GTM for new sensing products across North America and Europe at Sensata (positioning, pricing, channel and launch, $2M plus in first-year revenue), and led a 5-consultant team at Safran that narrowed 170 facilities down to a SAM of 28 and presented the market-entry call straight to their leadership. Both started the same way your research line does: market, competitor and customer research turned into one clear recommendation.

The tooling side is current work, not a stretch. At Applied Materials I automate recurring analysis with Claude AI agents and run the OKR cadence behind weekly and quarterly reviews; before that I shipped an AI job-matching platform zero to one (Python, OpenAI API, React) that got to 50 plus users, and cut client churn 50% at Pixis by reading retention and conversion data closely enough to act on it.
