Hiring Team, Revolut

Your post described a Bleeders and Leakers-shaped problem without naming it: take a fintech vertical from "we should have a point of view on this" to a product roadmap the CEO can act on. I have done that exact motion at Sensata, where margin was leaking across a \$627M business and nobody owned finding it. I built the dashboard that turned 1,200 scattered pricing opportunities into a \$433M shortlist prioritized by salesperson and product line, then negotiated \$700K plus of it back into margin in two quarters. The mandate was vague going in; the business case was not by the time I brought it to leadership.

What draws me to this specific role is the 0-to-1 half of it. At PriceKeel, the company I founded, I took a single discount-exception insight and built the guardrail engine and audit trail around it, then wrote the business case that got the company its first fundraise: sizing the market, defining the wedge against legacy CPQ tooling, and setting up the CRM, CPQ and deal-approval process from zero. That is the same shape of work as taking a new fintech vertical from research to a defensible product bet, just with a different customer at the other end.

The research muscle behind that work is the same one your posting asks for: market trends, competitive positioning, customer behavior, turned into an insight someone can build against. At Applied Materials today I size a fast-growing semiconductor segment by pulling scattered field and technical input from Sales, Engineering and Accounts into one view, and I automate the repetitive side of that synthesis with AI agents built on Claude so more of the week goes to the actual call and less to spreadsheets. I run that same discipline, plus the leadership decks and OKR cadence that keep a business aligned on it, whether the room is a CEO's office or a founding team.

Revolut's CEO Office is asking for someone who can hold both halves at once: the research that earns a point of view, and the discipline to turn it into a business case Sales and Engineering can build against. That is the work I want next. Proof trail at adhithyabhaskar.vercel.app/ref/revolut.
