Hiring Team, HP Inc.

Your posting asks for someone who turns customer insight into launch and product decisions across AI PCs, mobile-connected experiences, services and accessories, then stays on the number through post-launch performance. That is the exact loop I ran at Sensata, where I owned GTM for a new sensing product line end to end (positioning, pricing, channel, launch) across North America and Europe, and then tracked what happened after launch instead of handing the number to someone else.

The "AI PC" half of this role is where I think I can move fastest. At Applied Materials I partner with Sales, Engineering and Accounts to size a fast-moving tech market, and I automate the repetitive side of that analysis with Claude AI agents rather than burning hours on it by hand. That habit of treating AI as a working tool, not a talking point, carried over from building SwipeHire, an AI job-matching platform I built zero-to-one on the OpenAI API, and from running an 8-client AI marketing platform book at Pixis. A consumer product line built around positioning AI as a feature people actually feel benefits from someone who has shipped with the tooling, not just read about it.

Messaging and launch briefs only matter once Sales, Engineering, Design and Finance are reading the same page. I built that collateral for a 50-rep team at Sensata and watched win rates climb 30%, backed by 30+ direct customer and OEM interviews so the story came from the field, not a research summary. The same cross-functional discipline fed a price realignment that drove 12% higher revenue and 8% more market share, proof that the positioning work held up once it hit real deals.

I would welcome the chance to talk through how that GTM and launch experience maps onto the Consumer PC roadmap. The fuller build is at adhi-product-ai.vercel.app/ref/hp if useful.
