PITCH DECK | HP PRODUCT MANAGEMENT MARKETING MANAGER AND STRATEGY FOR CONSUMER PC

Consumer PC needs to turn "AI PC" from a spec sheet into a reason to upgrade now, not later. I already run that translation from technical feature to buyer value.

Currently sizing a fast-moving tech market with Sales, Engineering and Accounts at Applied Materials, after owning a $2M+ Sensata product launch end to end: customer insight to launch to post-launch performance.

- **$2M+ GTM** - Sensata sensing-product launch, owned end to end
- **30+ interviews** - direct customer and OEM insight behind the launch story
- **Win rates +30%** - sales enablement built for a 50-rep team
- **+12% rev, +8% share** - price realignment from competitive benchmarking
- **Claude AI agents** - automating repetitive market analysis today

WHY THIS DECK EXISTS

An AI PC sells on a spec sheet only to people who already read spec sheets. Everyone else needs the benefit translated before they will pay for it.

What that actually requires

A launch story built from real customer insight, not a feature list handed over by engineering unchanged.

Messaging and launch briefs that Sales, Design and Finance can all stand behind without a rewrite.

A post-launch number someone actually tracks and acts on, not a one-time announcement.

What I have already built at that layer

Owned **GTM end to end** for a new Sensata product line (positioning, pricing, channel, launch) for $2M+ in first-year revenue.

Ran **30+ direct customer and OEM interviews** that turned engineering features into a value proposition, lifting conversion 15%.

Built the **sales enablement** a 50-rep team used unmodified, plus the competitive tracking that followed the launch after it shipped.

> **The through-line: I already run the customer-insight-to-launch-to-post-launch loop a Consumer PC AI initiative depends on, just not yet on a PC.**

THE MANDATE, MAPPED

What the role covers, and where the proof already sits.

What the role covers

> *Lead product marketing and strategy for key Consumer PC initiatives, spanning AI PCs, mobile-connected experiences, services and accessories.*

> *Turn customer insight and market data into product and launch decisions.*

> *Build messaging, launch briefs and sales enablement; partner across product, engineering, design, sales, marketing, finance and legal.*

My proof

Applied Materials, live: sizing a fast-moving tech market with Sales, Engineering and Accounts, the same cross-functional loop a product strategy mandate runs on.

Sensata launch: $2M+ first-year revenue, built on 30+ direct customer interviews and messaging that lifted conversion 15%.

Sensata enablement and tracking: win rates +30% for a 50-rep team, plus the competitive tracking behind a 12% revenue, 8% share realignment after launch.

THE CLOSED-LOOP PROOF, IN DEPTH

Sensata: a product launch run end to end, not handed off between teams that do not exist yet.

Owned positioning, pricing, channel and launch for a new sensing product line selling across North America and Europe, then stayed on the number after it shipped.

$2M+

First-Year Revenue, Product Launch

Owned positioning, pricing, channel and launch end to end for a new sensing product line.

30+ Interviews

Direct Customer & OEM Engagement

Surfaced the pain points that shaped the launch story and raised CSAT 22%.

Win Rates +30%

Sales Enablement, 50-Rep Team

Launch briefs and case studies reps used unmodified across multiple regions.

The same discipline carries into Applied Materials today, where I size a fast-moving tech market with Sales, Engineering and Accounts and automate repetitive analysis with Claude AI agents.

FIRST 30 DAYS

What the first month on the Consumer PC mandate would look like.

WEEK 1

Sit with Product, Engineering and Design on a live AI PC initiative

Join the actual roadmap conversation before drafting a single line of positioning, the same field-first move that shaped the Sensata launch story.

Why first: a launch story built without the product and engineering team in the room is a guess dressed up as research.

WEEK 2-3

Turn customer insight into the launch brief

Run the direct customer research the way 30+ interviews shaped the Sensata launch, translating AI PC features into the benefit a buyer actually feels and pays for.

Why now: messaging only earns trust once it comes from the customer's own words, not a feature list.

WEEK 4

Ship sales enablement and a post-launch tracking plan

Hand Sales the same unmodified-ready collateral that lifted win rates 30% at Sensata, with the KPI view that keeps the story honest after the initiative ships.

Why this fast: a launch narrative earns trust the first time a rep uses it without editing it.

CLOSE

Consumer PC needs someone who already runs the customer-insight-to-launch-to-post-launch loop, not someone who has to learn it on an AI PC timeline. I do, today.

The core proof is live: at Applied Materials I size a **fast-moving tech market** with Sales, Engineering and Accounts right now, the same cross-functional input a Consumer PC product strategy mandate depends on.

What is harder to find is someone who has also owned a **product launch end to end** at Sensata for $2M+ in revenue, built the sales enablement that made it sellable for 50 reps, and tracked what happened to the number after it shipped.
