Hiring Team, ONE Finance

Your posting says the card has launched and is still early, and that whoever takes this owns a large part of it, screen to economics. That is the shape of work I already do: at Sensata I defined and ran the product roadmap for sensor solutions, managing a 100+ feature backlog with engineering across 3 regions, which cut time-to-market 20% and sped up releases 25%. A card this early needs someone who can turn a roadmap into shipped decisions fast, not just maintain one.

The economics side is where I spend most of my time, even outside a card context. As Pricing Lead at Sensata I ran the Bleeders & Leakers program and reset distributor and channel-partner margins from 53% to 61% in under two quarters, negotiating against competitive gaps and what each partner was actually willing to pay. That is the same posture your rewards economics need with issuing and network partners: bring the data, hold a point of view, and make the number move. I have also built predictive models in R on credit-approval drivers using 10-fold cross-validation and feature selection, which is the closest formal modeling work I have done in this exact domain.

I ship with engineers rather than hand them a spec and wait. At Sensata I ran 30+ customer interviews with OEMs and distributors and turned that feedback into shipped product changes that raised CSAT 22%; at Plug Power I built and ran 15+ paid-search and social tests myself, with real bid-optimization behind them, for -25% CPA. Both habits matter for a card where acquisition, activation and engagement all live on the same roadmap.

I am currently Strategic Marketing III at Applied Materials, building forecasting models across product groups and running AI agents on Claude to automate analysis I used to do by hand. I would like to bring that same build-first habit to OnePay's card team. Proof trail at adhi-product-ai.vercel.app/ref/one-finance.
