Hiring Team, Sauce Labs

Your posting asks for sales and churn forecasting models that hold up in a board deck. That is the exact muscle I built at Sensata: the FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pricing opportunities against a \$627M target by win rate, dollar-per-win and stage distribution across 3 regions and 20 product lines. It surfaced \$433M in margin gaps, and closing the highest-confidence ones first recovered \$700K+ in margin in two quarters.

Churn is the other half of the model you're building, and I have moved that number directly, not just reported on it. At Pixis I ran account strategy across an 8-client portfolio and cut churn 50% by catching risk signals before renewal instead of after, the same early-warning discipline a churn-prediction model is meant to produce.

I run this same forecast-to-board loop today as founder of PriceKeel: I own the CRM, forecast reviews and deal approvals myself, with an audit trail Finance can check on demand, so I know what it takes to keep a forecasting process honest across Sales, RevOps and Finance stakeholders who each want a different cut of the same number. Earlier, at Plug Power, I built the budget-to-forecast loop for marketing spend across multiple business units and took it to leadership for approval each cycle, the same demand-sizing exercise a capacity and territory plan runs on.

Sauce Labs sells renewal and expansion revenue on a full-lifecycle testing platform, which makes the gap between a forecast and the actual close rate a board-level question, not a back-office one. Proof trail at adhithyabhaskar.vercel.app/ref/sauce-labs.
