Hiring Team, Affirm

Your posting asks for someone who finds where paying breaks down before anyone has to tell them, and that is the habit I built at Sensata. I ran 30+ interviews with OEMs and distributors out of curiosity about where the experience was failing, turned the answers into a 100+ feature backlog, and held the engineering tradeoff conversations that cut time-to-market 20% and lifted feature adoption 18% off the KPI frameworks I built in SQL and GA4. None of that started from an opinion. It started from the data and the people who were stuck.

The cross-functional span you describe, Product, Engineering, Finance, Design and Partnerships, without formal authority over any of them, is the exact shape of my current role. As Strategic Marketing III at Applied Materials I build the forecasting and market-sizing models that Sales, Engineering and Accounts all have to agree on before a number goes into a plan, and I carry P&L targets while doing it. A quarter earlier, as Pricing Lead at Sensata, I shaped P&L-level pricing calls with senior executives on a multi-$100M business, weighing margin against competitive risk the same way a payments roadmap has to weigh conversion against cost. I also keep automating the repetitive side of that analysis with Claude AI agents, which is less time spent on the spreadsheet and more on the actual tradeoff.

What I have done consistently is turn ambiguous, conflicting inputs into a plan an engineering team can build against, in hardware, in e-commerce catalogs at GenY Medium, and zero-to-one on SwipeHire, where I wrote the PRD, ran 8+ A/B tests and lifted activation 25%. Payments is a new surface for that same instinct, and the "make repaying easier" problem in your posting is exactly the kind I want to spend the next few years solving.

I would welcome 15 minutes to talk through where you want the Consumer Payments roadmap to move next. Portfolio: adhi-product-ai.vercel.app/ref/affirm
