Hiring Team, Workday

At Sensata I owned go-to-market end to end for a line of sensing-product launches, from positioning through pricing, channel and launch plan, and it drove $2M+ in first-year revenue with a win-rate lift of 30% across the 50 reps who had to carry the story into the field. That is close to what the Platform Go-To-Market & Portfolio Strategy team is asking for: one credible platform story for Workday Build and Extend that holds up the same way in a field conversation, a demand gen asset and a launch moment.

Field enablement is where I already spend most of my week. I wrote the pricing and packaging guides and the talk tracks that got Sensata's reps through objections on multimillion-dollar customer quotes, and built the case studies and decks behind that 30% win-rate lift. I would bring the same discipline to arming your specialized sellers with the talk tracks, objection handling and demos they need for net-new and existing-base conversations around Build and Extend, built in close coordination with your Technical PMK team rather than handed off to them after the fact.

Demand gen is the other half of the role, and I have run it from both sides: as the person writing the content myself (the +35% qualified leads behind Sensata's launch campaigns) and as a founder who has to see the next problem coming before anyone names it. At Applied Materials I turn multi-product-group forecasting into one market view that Sales, Engineering and Accounts act on directly, and I run AI agents built on Claude to clear the repetitive analysis work so the time goes into the story instead. Running PriceKeel, my own B2B SaaS company, is where I learned to operate without a complete map: nobody hands you a brief when you are the first employee.

Proof trail at adhi-product-ai.vercel.app/ref/workday. I would welcome the chance to talk through how the Sensata launch motion maps onto Build and Extend.
