PITCH DECK | NOTION PRODUCT MANAGER, CONNECTIONS

Notion needs a Product Manager who can turn an ambiguous customer problem into a roadmap engineering ships against, at zero-to-one speed and at at-scale discipline. I have already run both halves of that motion, with a number on each.

A 100+ feature roadmap owned at scale, and a zero-to-one AI product built solo, on the same resume.

- **100+ feature backlog** owned with Engineering in Agile across 3 regions
- **30+ customer interviews** behind a 22% CSAT lift
- **Zero-to-one build**: SwipeHire, PRD to MVP to 50+ users, solo
- **AI agents built on Claude** automating my own recurring analysis today

WHY THIS DECK EXISTS

The posting is not "own one product area." It is finding the customer problem first, then building the strategy and the system with no playbook handed to you.

What that actually requires

Uncovering the customer problems that define the next chapter, not inheriting a roadmap someone else already scoped.

Making the hard calls between customer impact, business opportunity, technical complexity, speed and long-term quality, not deferring every tradeoff to engineering.

Operating at both zero-to-one speed and at-scale discipline, and using AI as a working collaborator in research, decisions and execution, not a side experiment.

What I have already run

At **Sensata**, I defined the product roadmap for a sensor line and owned a 100+ feature backlog with Engineering in Agile across 3 regions, cutting time-to-market 20%.

At **Sensata** again, 30+ structured interviews with OEMs and distributors set the roadmap, not a stakeholder request list, raising CSAT 22%.

I built **SwipeHire** zero-to-one with no team: wrote the PRD, scoped the MVP, shipped it on the OpenAI API, and now automate my own recurring analysis with Claude agents daily.

The through-line: every roadmap I have owned started with direct customer evidence, not a backlog handed down, and every build I have shipped had a number attached to it.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Uncover the customer problems and product opportunities that will define Notion's next chapter, then turn them into a focused strategy and roadmap."*

> *"Make the hard calls, balancing customer impact, business opportunity, technical complexity, speed, and long-term product quality."*

> *"Experience operating across both zero-to-one product development and the improvement of products at scale."*

My proof

Sensata, roadmap and strategy: defined the product roadmap for sensor solutions and owned a 100+ feature backlog with Engineering in Agile across 3 regions, accelerating releases 25%.

Sensata, the hard calls: balanced customer impact against technical complexity and speed across 50K+ connected devices, using SQL and GA4 cohort data to decide where to ship next.

SwipeHire, zero-to-one: wrote the PRD, scoped the MVP, and shipped an AI job-matching platform to 50+ users with no team behind me.

Applied Materials, AI as collaborator: automate my own recurring forecasting and pricing analysis with agents built on Claude, the same daily habit behind SwipeHire's OpenAI API build.

THE PROOF, IN DEPTH

Find the problem, build the system with engineering, then put a number on it.

Same pattern at scale and at zero: start from direct customer evidence, ship with engineering in the loop, then measure whether the roadmap call actually moved something the business cared about.

100+ Features

Backlog Owned Across 3 Regions

Product roadmap for sensor solutions, built and shipped with Engineering in Agile at Sensata, cutting time-to-market 20%.

30+ Interviews

Direct Customer Evidence, Not a Dashboard

Structured OEM and distributor conversations that set the roadmap and raised CSAT 22% at Sensata.

50+ Users

Zero-to-One, PRD to MVP to Launch

SwipeHire built solo on Python, the OpenAI API and React, with 12+ interviews and 8+ A/B tests driving a 25% activation lift.

None of these was a roadmap slide that sat in a folder. Each one closed the loop from a customer conversation to a shipped feature to a measured outcome.

FIRST 30 DAYS

What the first month on Notion's next-chapter roadmap looks like.

WEEK 1

Get directly in front of customers

Run the first round of structured customer conversations across segments, the same discipline behind 30+ OEM and distributor interviews at Sensata, so the first strategy call is grounded in evidence, not an assumption.

Why first: every roadmap I have owned started with direct customer evidence before a single feature got prioritized.

WEEK 2-3

Build the strategy and roadmap with engineering

Turn those conversations into a focused strategy and a roadmap built jointly with design, engineering and data science, not handed down after the fact, the same build-with-engineering motion behind the 100+ feature backlog at Sensata.

Why now: the roadmap only holds if engineering helped shape the tradeoffs, not just the delivery dates.

WEEK 4

Ship the first feature and instrument it

Ship the first scoped feature end to end, then instrument adoption with the same cohort and funnel discipline that powered SwipeHire and the Sensata KPI frameworks, so the next roadmap call is evidence, not opinion.

Why this fast: the same first-principles-to-launch motion behind building SwipeHire solo, not a plan for someday.

CLOSE

You are hiring someone to find the problem, set the strategy and build it with engineering. I have already run that motion at scale and at zero, with a number on each.

The at-scale half: a **100+ feature roadmap** owned with Engineering in Agile across 3 regions at Sensata, grounded in 30+ direct customer interviews that raised CSAT 22% and cut time-to-market 20%.

The zero-to-one half: **SwipeHire**, an AI job-matching platform built solo from PRD to MVP to 50+ users. At Applied Materials today I automate my own recurring analysis with agents built on Claude, because the time saved should go into the next roadmap call, not the last report.
