Hiring Team, ScaleAI

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard that gave leadership day-to-day visibility into 1,200 pricing opportunities against a \$627M target: deal status, pricing and margin, ranked by region and product line. That is close to the exact system your posting describes wanting for the Enterprise pipeline, and I recovered \$700K+ of the margin the dashboard surfaced within two quarters by negotiating fixes instead of just reporting the shortfall.

Deal structuring is the other half of the role I already run. When I repriced Sensata's distributor and channel-partner terms to lift margins from 53% to 61%, the fix only held because Finance signed off on the model and Sales confirmed what a partner would actually accept before it shipped. I ran that same routing discipline on multimillion-dollar customer quotes alongside senior executives, where pricing, Finance and Legal all had to agree before a deal moved forward, which is the same stakeholder chain your Deal Pricing Execution and Cross-Functional Deal Coordination sections describe.

That routing discipline is also why I started PriceKeel. I kept watching discount exceptions get approved without anyone recording why, so I built the audit trail that gives Finance actual evidence for the call, and a guardrail engine that flags the exception before it becomes a habit. It is the same instinct behind your Process Optimization section: standardize the recurring approval steps into something repeatable instead of solving the same bottleneck by hand every quarter.

I would bring that same pattern, find the leak, fix the deal structure, make the fix explainable to Finance, to Scale's Enterprise Deal Desk. Proof trail at adhi-pricing-ai.vercel.app/ref/scale-ai.
