PITCH DECK | GOOGLE SALES OPERATIONS SENIOR ASSOCIATE, GLOBAL BUSINESS STRATEGY AND PLANNING

Every workstream on this team starts the same way: an ambiguous question, a room full of global stakeholders, and a clock. I already build the scoped, data-backed call that gets it in front of leadership on time.

Quantitative modeling, polished executive presentations and ad hoc corporate initiatives from someone who builds the model and briefs the room that acts on it.

- **5-consultant** management-consulting engagement for Safran: 170 facilities scoped to a SAM of 28
- **$433M** in margin gaps surfaced for leadership via a 1,200-opportunity Power BI model
- **AP26 revenue models** and multimillion-dollar customer quotes run directly with senior executives
- **8-client, $15K-$90K/month** advertising portfolio spanning retail media and consultative sales
- **Claude AI agents** automating recurring strategy analysis at Applied Materials

WHY THIS DECK EXISTS

This req is one discipline wearing two hats: the model that survives scrutiny, and the judgment that turns it into one executive-ready call under a deadline.

What falls apart without that person

A central team that touches multiple areas of Google's Ads business across a range of topics cannot afford a slow translation: by the time a finding reaches an executive leader, the data behind it has to already be reconciled, not still being argued over.

Ad hoc corporate initiatives with global stakeholders do not come with a template. Without someone who can structure an ambiguous question into a prioritized scope fast, each one either stalls or arrives too late to shape the decision.

The fix is one person who treats the quantitative model and the executive narrative as one job, not a handoff between two people.

What I already run

At **Safran**, I led a 5-consultant team from an undefined market-entry question to a scoped SAM of 28 across 4 verticals, briefing the roadmap directly to their leadership on a fixed engagement clock.

At **Sensata**, I turned 1,200 scattered pricing opportunities into $433M in margin gaps leadership could prioritize, then carried that same rigor into AP26 revenue models directly with senior executives.

Both mean the ambiguous-to-structured loop this team runs daily is not new to me; I have already built the scope, the model and the room briefing in one motion.

Developing a prioritized scope for resolution in ambiguous situations, then executing the quantitative modeling behind it for executive leaders, describes this exact loop.

THE REQ, MAPPED

What the Strategy and Planning posting asks for, and where the proof already sits.

What the role covers

Lead complex and time-critical projects for executive leaders, developing a prioritized scope and approach for resolution in ambiguous situations.

Analyze and determine key insights by crossing research results with key business drivers, trends, and operating metrics.

Execute quantitative analyses and modeling that translates data into actionable insights.

Communicate findings to executive leadership by preparing polished presentations and identifying key takeaways.

My Proof

Ambiguous, time-critical scoping: led 5 consultants from 170 unscoped facilities to a SAM of 28 across 4 verticals for Safran, on a fixed consulting-engagement clock.

Key insights from operating metrics: built Sensata's Bleeders and Leakers view across win rate, $/win and stage distribution for 1,200 opportunities in 3 regions.

Quantitative modeling to actionable insight: that same FY2026 Power BI model surfaced $433M in margin gaps for leadership to prioritize by salesperson and product line.

Polished executive presentations: AP26 revenue models and multimillion-dollar customer quotes with senior executives, plus leadership decks and OKR reviews running at Applied Materials today.

THE PROOF, IN DEPTH

Safran: turn an undefined market-entry question into a scope a leadership team can act on.

A pro-bono consulting engagement run like a client project: no existing scope, a hard deadline, and a leadership audience waiting on the answer. I led the team that built one.

5

Consultants Led

Owned the workstream end to end: scoping, analysis cadence and the final briefing to Safran's leadership.

170 to 28

Facilities Scoped to a SAM

Turned an open-ended market question into one addressable number, the same compression a prioritized scope needs.

150+ / 10+

Facilities & Competitors Assessed

Across 4 verticals, feeding the market-entry feasibility read leadership used to decide where to move next.

That same compression runs at Sensata, where 1,200 scattered pricing opportunities became one $433M number for leadership, and at Applied Materials, where Sales, Engineering and Accounts input becomes one strategic view every quarter.

FIRST 30 DAYS

What the first month inside Strategy and Planning looks like.

WEEK 1

Map how a finding becomes an executive call

Sit with the team and the executive leaders it serves to learn how research results, business drivers and operating metrics currently move into a decision, and shadow one live workstream before touching anything.

Why first: the same instinct that had me learn Applied Materials' Sales, Engineering and Accounts loop before building on top of it.

WEEK 2-3

Own one ad hoc corporate initiative end to end

Take one open, ambiguous question, build the prioritized scope and the quantitative model behind it, and carry it into a polished presentation for an executive leader, the same loop that turned Bleeders and Leakers into a leadership decision at Sensata.

Why now: the fastest way to earn trust on an unfamiliar business is to ship one complete recommendation, not a slide of open questions.

WEEK 4

Propose the recurring cadence

Propose the review that keeps that recommendation current against the next trend or operating metric, mirroring the weekly and quarterly business reviews already running at Applied Materials and Sensata.

Why this fast: one analysis is not finished until the cadence exists to re-check it every cycle, not just the one it shipped in.

CLOSE

You are hiring someone to turn ambiguous, time-critical questions into a scoped, data-backed call for executive leaders. I already run that loop.

The clearest proof is Safran: an undefined market-entry question, **5 consultants**, and a scope taken from **170 facilities to a SAM of 28** across 4 verticals, briefed directly to their leadership.

The data-modeling half sits at Sensata: a Power BI system covering **1,200 pricing opportunities** that surfaced **$433M in margin gaps**, plus AP26 revenue models run directly with senior executives. The scoping, the model and the executive briefing are not three separate skills to learn on the job.
