Hiring Team, Druva

At Sensata I ran the Bleeders and Leakers margin-recovery program: 1,200 pricing opportunities tracked against a \$627M target, \$433M surfaced for leadership to prioritize by salesperson and product line, and \$700K+ recovered in two quarters. That is the deal desk math your posting describes: structure the commercial terms a customer needs against the margin Druva needs to protect, deal by deal.

I run that same discipline today as founder of PriceKeel: I own the CRM, CPQ, forecast reviews and deal approvals myself, with an audit trail Finance can check on demand. I built a guardrail engine that scores every discount exception against a company's own closed-won and closed-lost precedent instead of a gut call, which is the same approval-workflow standardization your posting asks a Deal Desk Analyst to drive.

The SaaS metrics your team tracks (ACV, ARR, churn, net retention) are the ones I used to reprice Sensata's distribution channel, raising distributor margins from 53% to 61% in under two quarters, and the ones I watched most closely cutting client churn 50% at Pixis. At Applied Materials I automate the repetitive analysis behind pricing proposals with AI agents built on Claude, the kind of workflow automation your posting calls out for cutting friction and unlocking data-driven insight.

Protecting nearly 7,500 customers' data the way Druva does means every deal structure has to hold up under real scrutiny, not just close fast. That is the standard I priced to inside Sensata's Industrial BU and the one I am building into PriceKeel now. Proof trail at adhi-pricing-ai.vercel.app/ref/druva.
