Hiring Team, Zum

Your posting asks for someone who builds a sales-enablement library Sales actually reaches for mid-deal, not one that sits unopened after launch. At Sensata, I built the battlecards, case studies and launch decks behind a sensing-product GTM launch for 50+ reps, and it moved their win rate 30%. That is the same mandate behind enabling the sales team: partner on stalled deals, arm the field, and iterate off what actually closes.

Positioning was not handed to me either. I built the messaging frameworks that turned sensor capabilities into persona-specific value, one story for OEM engineering buyers and a different one for distributor partners, then pressure-tested both with 30+ structured win/loss interviews before anything shipped. That is the discipline your posting describes when it asks for positioning stress-tested with sales and buyer data rather than written off a spec sheet, and it is close to the three-persona problem you are solving across transportation directors, operations leaders and procurement teams.

Competitive intelligence ran the same way. Benchmarking across 10+ players fed a 12% YoY price realignment, and ongoing competitor tracking across EMEA and the US kept our launch timing honest against what rivals were shipping. I also owned GTM planning end to end, messaging, enablement, campaign briefs and launch comms, for a repeatable motion that drove $2M plus in first-year revenue, the same cross-functional lane your posting runs across Product, Sales, CS and Demand Gen.

I have also built a GTM function from nothing: an AI job-matching platform where I owned ICP definition, competitor teardowns and pricing-tier decisions myself with no team or playbook to inherit, the same self-directed, comfortable-with-ambiguity mode your posting is asking for. At Applied Materials today I automate my own recurring competitive analysis with AI agents built on Claude instead of rebuilding the same report every cycle, time that would go straight into Zum's launches and enablement work instead. Proof trail at adhi-product.vercel.app/ref/zum.
