PITCH DECK | ZUM SENIOR PRODUCT MARKETING MANAGER

Zum needs positioning that lands with three different buyers, transportation directors, operations leaders and procurement teams, and a sales-enablement system Sales can win stalled deals with. I have already built both pieces, twice, with no playbook to start from.

A battlecard-and-benchmarking system built from zero, and a zero-to-one AI startup GTM, on the same resume.

- **+30% win rate** from a sales-enablement system built for 50+ reps at Sensata
- **10+-player benchmarking** behind a 12% YoY price realignment
- **$2M+ first-year revenue** from an end-to-end GTM launch
- **30+ win/loss interviews** behind a 15% conversion lift
- **AI agents built on Claude** automating my own recurring analysis at Applied Materials

WHY THIS DECK EXISTS

The mandate is not "describe the product." It is building positioning for three distinct buyers and a sales-enablement system from zero, with no playbook to copy.

What that actually requires

A messaging framework that speaks differently to a transportation director, an operations leader and a procurement team, built once and reused across launches, not rewritten per deal.

A sales-enablement library, battlecards, objection handling, pitch decks, one-pagers, ROI frameworks, that Sales reaches for mid-deal and leadership can point stalled deals at.

Competitive intelligence as a running discipline, briefs and battlecards that stay current as new entrants and positioning shifts show up, not a one-time landscape doc.

What I have already run

At **Sensata**, I built the messaging framework that spoke differently to OEM engineering buyers and distributor partners, pressure-tested with 30+ win/loss interviews, for a 15% conversion lift.

At **Sensata** again, I built the battlecard, case-study and launch-deck system for 50+ reps from scratch, moving win rates 30%.

I ran 10+-player competitive benchmarking that fed a 12% YoY price realignment, plus ongoing EMEA/US competitor tracking.

The through-line: every system I have built started with no existing playbook, and ended with a number Sales or Product leadership could point to.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Translate capabilities for each persona: district transportation directors, operations leaders, and procurement teams."*

> *"Build and maintain a sales enablement library: battlecards, objection handling, pitch decks, one-pagers, ROI frameworks... partner with Sales leadership on stalled deals."*

> *"Monitor the competitive landscape, positioning shifts, and new entrants; produce competitive briefs and battlecards."*

My proof

Sensata, persona-specific positioning: messaging frameworks built from scratch for OEM engineering buyers and distributor partners, lifting conversion 15%.

Sensata, the sales-enablement system: battlecards, decks and case studies for 50+ reps, moving win rates 30%.

Sensata, competitive intelligence: 10+-player benchmarking behind a 12% YoY price realignment, plus EMEA/US competitor tracking feeding positioning decisions.

Sensata, buyer research: 30+ structured win/loss interviews with OEMs and distributors, the habit that keeps messaging honest before it ships.

THE PROOF, IN DEPTH

Map the buyer, build the enablement system, then put a number on it.

Same pattern across two Sensata launches and a solo startup: build the persona-specific message, ship the enablement asset, then measure whether it moved a number Sales or Product leadership was accountable for.

+30% Win Rate

Sales-Enablement System for 50+ Reps

Battlecards, pitch decks and case studies built from scratch for live sensing-product launches at Sensata.

15% Conversion Lift

Persona-Specific Positioning, Stress-Tested

30+ win/loss interviews with OEM and distributor buyers shaped the messaging before launch.

10+ Players

Competitive Benchmarking Behind a Price Move

Fed a 12% YoY revenue and 8% market-share gain through price-realignment decisions at Sensata.

None of these was a positioning doc that sat in a folder. Each one closed the loop from message to a number the business was accountable for.

FIRST 30 DAYS

What the first month building Zum's persona messaging and sales-enablement system looks like.

WEEK 1

Map the three-persona buying committee

Interview recent closed-won and closed-lost deals to separate what moves a transportation director from what moves an operations leader or a procurement team, the same win/loss discipline behind the 30+-interview program at Sensata.

Why first: message before you build the battlecard, not after.

WEEK 2-3

Ship the first sales-enablement system

Build the first battlecard, objection-handling guide and ROI one-pager directly with Sales, versioned once as a reusable system instead of rebuilt per rep per stalled deal.

Why now: the same build that moved Sensata's win rate 30% instead of a deck no rep opened twice.

WEEK 4

Stand up the competitive-intelligence loop

Institute the running benchmarking discipline behind the 10+-player competitive program at Sensata, pointed at Zum's own competitive set, then automate the reporting step with the first AI agent so briefs ship every cycle, not once a quarter.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to build persona messaging and a sales-enablement system from zero. I have already built both, with a number on each one.

The positioning half: **15% conversion lift** from a persona-specific messaging framework stress-tested with 30+ win/loss interviews, built with no existing playbook.

The enablement and intelligence half: **+30% win rate** from a battlecard-and-case-study system for 50+ reps, plus **10+-player competitive benchmarking** behind a 12% YoY price move. At Applied Materials I now automate my own recurring competitive analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next battlecard.
