Hiring Team, LinkedIn

Your posting asks this Strategy & Operations Senior Associate to own territory allocation, audits, and dashboard development for the Customer Success organization. I built that exact mechanism at Sensata: a Power BI dashboard that ranked 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines by territory, win rate and stage, then used it to recover $700K in margin in two quarters and raise distributor margins from 53% to 61%. That dashboard is still how my old team decides where to focus each week.

I run a smaller version of the same process now as founder of PriceKeel, where I own CRM, CPQ, forecast and pipeline reviews, and the audit trail Finance checks against every discount exception. At Applied Materials I automate the repetitive side of forecasting and reporting with Claude AI agents, so the planning cadence stays current without eating a full day of analyst time, the kind of AI-tool fluency your suggested skills list calls for.

The customer-value half of this role is one I have already run. As Customer Success Manager at Pixis I carried P&L and revenue targets for an 8-person team across 8 client accounts, cut churn 50% through proactive account strategy and vertical playbooks, and reported recommendations to senior management while feeding customer signal back into product. That is the territory-planning-to-retention loop your Sales Solutions Customer Success team is asking this seat to run.

I would like to bring that operating discipline to LinkedIn's Customer Success organization. Proof trail at adhithyabhaskar.vercel.app/ref/linkedin.
