Hiring Team, Pinterest

Your posting wants someone with deep expertise in ads delivery, bidding, optimization and automation, and able to translate that into a narrative a cross-functional team can rally around. At Pixis, an AI ad-optimization platform, I trained an 8-person client team on AI bidding and creative-automation tooling, then ran that team against its own P&L and revenue targets while hiring, coaching and managing day to day. When one client's ROAS stalled, I rebuilt the full funnel myself (shopping feed, smart bidding, creative, lookalikes) and turned it into 3x ROAS in a month, the kind of complex-to-clear story your posting is asking a PMM team to tell at scale.

The paid-media range behind that story is broad on purpose. I have run Google, Meta, LinkedIn and programmatic DSPs at Plug Power, and retail media specifically, Amazon Ads and Criteo, at Pixis, where per-client budgets ran $15K to $90K a month across an 8-client book. Cutting client churn 50% there came from building playbooks off each account's own data rather than a standard report, which is the instinct a delivery-and-optimization portfolio needs more than any single platform skill.

The go-to-market side of this role is familiar ground too. At Sensata I owned GTM end to end for a new sensing product line, positioning, pricing, channel and launch, across North America and Europe, and built the sales enablement (battle cards, case studies, decks) that lifted win rates 30% for 50+ reps. That is the same partnership with Product and Engineering your posting calls out, just pointed at a different kind of complex, cross-functional launch.

Today at Applied Materials I carry P&L and revenue targets as Strategic Marketing III, turning scattered technical input from Sales, Engineering and Accounts into one market view, and automating the repetitive side of that analysis with AI agents built on Claude so the strategic work gets the time. Proof trail at adhi-product-ai.vercel.app/ref/pinterest.
