PITCH DECK | COREWEAVE SENIOR ANALYST, REVOPS FIELD PLANNING AND PERFORMANCE

A newly public AI hyperscaler scaling its Global Field Organization needs someone who already turns rep-level and regional performance data into the scorecard leadership acts on, not another forecast review that restates last quarter.

Field performance analytics, forecasting and AI-driven RevOps, built and run hands on, not delegated.

- **1,200** opportunities tracked in a win-rate and stage-distribution dashboard at Sensata
- **$433M** in margin gaps surfaced for leadership to prioritize by salesperson and product line
- **$700K+** recovered in 2 quarters acting on that same performance data
- **PriceKeel** - runs CRM, CPQ and forecast reviews, founder to admin
- **Claude AI agents** automate recurring forecasting and reporting work today

WHY THIS DECK EXISTS

The risk in a scaling Global Field Organization is not a lack of data. It is performance gaps nobody surfaces until the QBR.

What a scaling field org runs into

Sales performance data sits in the CRM, the forecasting tool and a dozen spreadsheets, but nobody owns turning it into a scorecard that flags a rep, team or regional gap before the quarter closes.

Territory, quota and segmentation plans get built once at scale-up speed, then nobody revisits coverage as new verticals and geographies get added.

The fix is not another dashboard review. It is one analyst who owns the performance data end to end: the scorecard, the root cause, and the recommendation that actually gets executed.

What I have already run, hands on

At **Sensata**, I built the Bleeders and Leakers dashboard across 1,200 opportunities and a $627M target, surfacing $433M in margin gaps by salesperson and product line for leadership to prioritize.

I ran the win-rate, average $/win and stage-distribution analysis behind that dashboard, the same pipeline conversion and sales cycle work a field performance scorecard needs.

I run that same analytical loop today as founder of **PriceKeel**: CRM, CPQ, forecast and pipeline reviews, with an audit trail Finance can check without asking me first.

Monitoring sales performance across segments, verticals and geographies, and turning rep-level gaps into data-backed recommendations, is describing this exact loop: build the scorecard, spot the shortfall, drive the fix.

THE REQ, MAPPED

What the Senior Analyst, RevOps opening asks for, and where the proof sits.

What the role covers

> *"Monitor, analyze, and report on sales performance metrics across segments, verticals, and geographies."*

> *"Identify performance gaps at the rep, team, and regional level, and propose data-backed recommendations."*

> *"Use AI tools (LLMs, AI copilots, workflow automation) to accelerate analysis, reporting, and forecasting."*

My Proof

Sensata Bleeders and Leakers: win rate, average $/win and stage distribution by salesperson across 3 regions, 4 product families and 20 product lines.

$433M in margin gaps surfaced: prioritized by salesperson and product line, the exact rep, team and regional gap-finding this role asks for.

Claude AI agents, not a pilot: automate recurring forecasting and reporting work at Applied Materials today.

PriceKeel CRM and CPQ: run hands-on as founder, including the forecast and pipeline reviews behind every deal.

THE SENSATA PROOF, IN DEPTH

One scorecard, one root-cause program, one margin number leadership could act on.

The Bleeders and Leakers program started as a pricing initiative but ran on the same spine this req describes: segment and regionalize the pipeline, score win rate and stage distribution by salesperson, and turn the worst gaps into a recommendation Sales Leadership would actually act on at the next QBR.

$433M

Margin Gaps Surfaced

Prioritized by salesperson and product line across 1,200 opportunities and a $627M target, so leadership knew exactly where to act first.

$700K+

Margin Recovered in 2 Quarters

Acting on the dashboard's own findings, not just reporting them: the same close-the-loop standard a field performance scorecard has to meet.

53% to 61%

Distributor Margin Lift

Raised by repricing parts sold through distribution, the channel and coverage layer underneath territory and segmentation planning.

The common thread: build the scorecard, spot the shortfall, recover the number, then repeat it in the next QBR. That is the loop I would bring to CoreWeave's Field Planning and Performance team.

FIRST 30 DAYS

What the first month on CoreWeave's Field Planning and Performance team looks like.

WEEK 1

Trace the current scorecard

Map today's sales performance reporting across segments, verticals and geographies end to end, and flag where a rep, team or regional gap is already visible in the data but not yet in a deck.

Why first: a shortfall is usually visible in the pipeline data before anyone names it. Same move that started the Bleeders and Leakers program at Sensata.

WEEK 2-3

Ship the shortfall analysis

Build the win/loss, pipeline conversion and sales cycle analysis behind the worst gap, and bring Sales Leadership and RevOps a data-backed recommendation they can act on at the next QBR.

Why now: the same sequence, surface then act, recovered $700K+ in margin in 2 quarters at Sensata.

WEEK 4

Wire it into forecasting

Fold the finding into the long-range revenue model and forecast review, and partner with Sales Enablement on the rep skill gap the data points to.

Why this fast: a gap nobody forecasts against reappears next quarter. Wiring it in is the step that makes the fix stick.

CLOSE

You are scaling a Global Field Organization and need enterprise-grade rigor without losing startup speed. I have already built that scorecard, found that gap, and recovered the number behind it.

The core proof is Sensata's Bleeders and Leakers program: **$433M in margin gaps surfaced** by salesperson and product line, and **$700K+ recovered in 2 quarters** acting on it.

What is harder to find is someone who runs that same loop today. I operate **CRM, CPQ and forecast reviews as founder of PriceKeel**, and I already automate recurring forecasting and reporting work with **Claude AI agents** at Applied Materials, so the AI-first habit behind this role is not something I would need to build on the job.
