Hiring Team, Semgrep

Every pricing-model transition I have watched stall does it in the same place: the deal-approval matrix underneath, not the rate card. At Sensata I rebuilt that matrix on the Bleeders and Leakers program, resetting discount thresholds and escalation paths against competitive gaps and actual customer willingness to pay, and recovered $700K in margin in two quarters along the way. I would start your seat-to-consumption transition the same way: fix the approval and escalation layer before the rate card changes underneath it.

That is also why I founded PriceKeel. I run the company's own CRM and CPQ, write the data model behind every discount exception, and built the audit trail that gives Finance evidence for a pricing decision instead of a verbal explanation after the fact. It is the same system ownership your posting describes wanting over the architecture of your revenue systems, just built from scratch rather than inherited.

Directing a team through specs instead of code is a discipline I already practice: I wrote the exact specs behind the Salesforce, Adobe Analytics and Pardot automation I shipped at Plug Power, and I would bring that same precision to your Salesforce admin team's roadmap, translating business requirements into something they can execute without a back-and-forth. I already run the automation habit you are describing, too. As Strategic Marketing III at Applied Materials, I automate recurring forecasting and reporting work with agentic AI workflows built on Claude, the same lens I would point at your deal-desk and admin workload.

I would welcome fifteen minutes to walk through how I would sequence the first ninety days of the deal-approval redesign, starting with the matrix rather than the pricing model. Proof trail at adhithyabhaskar.vercel.app/ref/semgrep.
