Hiring Team, Fivetran

Your posting for the Senior Technical Product Marketing Manager role is refreshingly specific about what it actually wants: someone who can sit with SQL and a data model long enough to write about it credibly, not someone who paraphrases an engineer's slide. That is the exact split I have lived in at Sensata, where I built the KPI frameworks myself, in SQL and GA4, across 50,000-plus connected industrial devices, and then wrote the positioning that made the resulting adoption signals mean something to an OEM buyer who had never seen the dashboard.

The technical-to-narrative handoff is where most product marketing breaks, so I have made a habit of owning both halves. I built the FY2026 Power BI Bleeders and Leakers dashboard that tracked 1,200 pricing opportunities against a \$627M target across three regions, twenty product lines, and then turned the same data into the executive story that recovered over \$700K in margin in two quarters. On the launch side, I owned end-to-end GTM for a new sensing product line, positioning, pricing, channel and launch together, translating the underlying technical specs into buyer-ready value propositions that lifted conversion 15% for OEM and distributor accounts. Thirty-plus customer interviews fed that positioning directly, the same research discipline your posting calls market research on industry trends.

A modern data platform mid-merger with dbt Labs needs marketing content that can hold up next to the people who build the product, and needs it fast while the story is still being written. I already run that pace: I automate the repetitive side of market and competitive analysis with Claude AI agents in my current role at Applied Materials, and I am building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, on the side. Both mean I show up already fluent in the tools and the tempo this role runs on.

I would like to bring that data-fluent, technical-audience track record to Fivetran's positioning. Proof trail at adhi-product-ai.vercel.app/ref/fivetran.
