Hiring Team, Ramp

At Sensata I owned the go-to-market for a new sensing-product line before the category had a playbook: set the ICP, wrote the positioning, built the launch and enablement motion, and drove $2M+ in first-year revenue once it shipped. That is close to what New Products is asking for here: find the wedge before the roadmap is fixed, then build the commercialization engine once it lands, not a launch calendar someone else already wrote.

I am doing the same motion again right now, solo, at PriceKeel: a decision-integrity layer for B2B SaaS deal pricing, running pilots with early customers while raising its first round. The customer problem is still being sharpened, the product changes with every pilot conversation, and I own the ICP, the pricing model and the investor story end to end because there is no one else to hand it to. Ramp's description of building before the market playbook is obvious is a job I already run, just without a team around it yet.

At Applied Materials I turn multi-product-group market sizing into one view that Sales, Engineering and Accounts act on, and I clear the repetitive research and synthesis work with AI agents built on Claude so more time goes into the judgment calls. That cross-functional pull, with no reporting line into any of those teams, is the same lever this role runs on Product, Engineering, Sales and Growth, just earlier in a product's life.

The stage Ramp is hiring for, before the playbook rather than after it, is the one I keep choosing. I would welcome a conversation about where New Products needs its next read built. Proof trail at adhi-product-ai.vercel.app/ref/ramp.
