Hiring Team, TikTok

Your posting says the research should end in decisions, not decks. At Sensata I ran the Industrial BU's competitive benchmarking across 10+ players, turned it into a price realignment, and watched it move +12% YoY revenue and +8% market share. That is the test I apply to any research agenda: if it does not change what a leader does next week, it was not sharp enough yet.

I have worked both sides of the strategy-consulting line your preferred qualifications describe. I led a 5-consultant team through Safran's TAM/SAM/SOM study, narrowing 170 facilities to a serviceable market of 28 and presenting a market-entry recommendation straight to their leadership. Inside Sensata, that same instinct went into AP26 revenue models and multimillion-dollar customer quotes alongside senior executives, where the question was never short on ambiguity and the answer still had to be a number someone could act on.

I also build with the tools your preferred list names directly. At Applied Materials I automate the repetitive half of market and competitive research with Claude AI agents, which frees the time for the harder framing work. Outside of that role, I built an AI job-matching product from a blank page, including the pricing model and the GTM, so I know what a generative AI product looks like from the build side, not just the research side. That matters for a team asked to track where AI x sales and CRM is actually headed, not where the vendor decks say it is.

I would like to bring that mix, pricing-literate strategy work plus hands-on AI building, to the GMPT team's research agenda. Proof trail is at adhi-pricing-ai.vercel.app/ref/tiktok.
